# On the continuity of Folner averages II

**Gabriel Fuhrmann**
Durham University
`gabriel.fuhrmann@durham.ac.uk`

As the title suggests, this talk discusses some new results concerning the continuity of Følner averages. After a brief introduction of the technical background, we will take a look at an example (the possibly simplest one) of a topological dynamical system where along some but–notably–not all Følner sequences every point $x$ is generic for an invariant measure $\mu_x$ and the map $x \mapsto \mu_x$ is continuous. **(joint work with Maik Gröger, Till Hauser)**
