

## **Backward dynamics in S-unimodal maps**

**Roberto De Leo**

Howard University

`roberto.deleo@howard.edu`

In this talk I will present my results on the asymptotics of backward trajectories of S-unimodal maps of the interval. My results are based on a previous recent article, joint work with Jim Yorke, where we introduced a graph encoding the qualitative dynamics of a discrete dynamical system and studied in detail the case of the logistic map.
