

Scope of Supports at Rhodes College for Treating Professionals

As you consider your patient's readiness to return to Rhodes College, please be aware of the following conditions on campus and resources that are available to students:

Undergraduate students are expected to be enrolled full-time, with a course load of 4 courses (16 credits) each semester.

Residence Life

- Students are required to live in campus housing as a part of a 3-year residency requirement.
- Students who live in campus housing live in a group setting. They may have a roommate or suitemates and do not typically have a private bathroom.
- Students who live in campus housing are not regularly supervised. Students are expected to function independently and given both the privacy and freedom to do so.

Student Health Center

- The Health Center has one full-time Nurse Practitioner who serves as a primary care provider for full-time students. When specialty care is required, off-campus referral is necessary.
- Appointments are available on weekdays during business hours. The Health Center does not have an overnight clinic.
- The [Health Center](#) website shares additional information about supports available.

Counseling Center

- The Counseling Center offers short-term, individual and group sessions to currently enrolled, degree-seeking students.
- Students who present concerns that require longer or more intensive treatment, expertise not available at the Counseling Center, or services outside the scope of the Counseling Center's services are helped with referrals to off-campus practitioners who are able to provide such care.
- Students may access a psychiatrist that the college contracts. The psychiatrist is on site one day a week and sees students as clinically indicated.
- The [Counseling Center website](#) shares additional information about supports available.

Care Manager

- The Care Manager meets with students individually as they are returning from a medical leave of absence or hospitalization.
- Students are connected to both on and off-campus resources and create a support action plan for academic preparedness and continued wellness.
- Services also include offering short-term support and guidance, identifying realistic goals, ADA accommodation facilitation, and assistance with course withdrawal/s, mid-semester withdrawal, and leaves from the college. Services are not for treatment or diagnostic purposes.
